ABSTRACT

[0071] Storage devices in accordance with embodiments of the present invention, and systems utilizing such storage devices, can allow for archival of various articles, particular planar articles such as electronic media, records, papers, etc. Such a storage device can comprise a sleeve having a pocket for receiving said article and one or more tabs connected with the sleeve. In some embodiments, said one or more tabs can be removably connected with the sleeve, while in other embodiments, multiple sleeves can have one or more tabs formed in various shapes, sizes, and/or colors and arranged in varying positions along an edge of the sleeve. A system utilizing such storage devices can allow for archival of various articles such that the location of an article can be readily identified by identifying one or more tabs connected with the corresponding sleeve.
